AIDS AND HOMOEOPATHY

The Disease, Acquired Immunodeficiency syndrome or AIDS is the Complex & dreadful disease of the century. It is a serious condition in which the body's defence system (immune system) is compromised or weakened to a grosser extent. On-going research on AIDS, its virus HIV, human genome and other experiments in this field have yielded very little. Conclusion, AIDS is an incurable disease according to the modern system.

If we trace back the history, it says that AIDS virus first appeared in the promiscuous group of homosexuals. The research clearly showed that these individuals had already been infected several times by venereal (sexually transmitted diseases) and treated repeatedly with antibiotics. The initial appearance of virus in human body was only the result of already stressed immune system and not the cause of it or indeed we can say it is the similar phenomenon of scavengers eating the decayed matter. It was a result of already stressed immune system under the effect of some venereal disease which was further weakened by repeated assaults of strong medicines or drugs. In the nut shell one can conclude that stressed immune system which is ill treated can cause a state or a syndrome called AIDS.

CAUSES OF AIDS: - Sexually transmitted diseases, Genetic predisposition, from mother to child in utero, Transfusion of body fluids like blood from contaminated blood.

SYMPTOMS: - Acute symptoms caused by fever, cutaneous eruptions, myalgia and bad feeling; after 6-8 weeks there is a presence of antibodies, anti HIV, general lymphadenopathy, unexplained weight loss persistent diarrhoea and the presence of other associated diseases, secondary infectious diseases and secondary cancers.

AIDS AND HOMEOPATHY: - Now the question is what homeopathy can offer in such terminal diseases? Homeopathic prescription is based on the symptom similarity. Though the disease is new but its treatment is not new at all. So any disease state (acute or chronic, old or so called new) if the same is curable can be cured by the rational application of the Homeopathic principles & doctrines which are based on infallible nature's law. So before the development of the irreversible pathology Homeopathy can offer great help. Homeopathy does not claim to treat AIDS especially when the pathology has become irreversible. Where the vital force becomes so weak by the disease that it cannot regain its malignant disease. Homeopathy makes the immune system stronger so that the acute miasm of AIDS does not flare up. In the fully developed cases it can palliate the disease upto some extent depending upon the age and the other factors which may contribute in the healing process of an individual. Death in some cases is inevitable but through homeopathy one can make this journey less painful and can experience the blissful moment being in the conscious state.
